

RIICCM303 – Conduct vacuum excavations

METHOD

This is delivered face to face. Minimum numbers are required. Trainer will travel to your work site, deliver the training and assess your team in their usual work environment.

COMMENCEMENT

Once enrolled we schedule the practical face-to-face component with management and organise to meet the operator on site, where they are expected to set up and commence the job as they would normally do. Observations are made against a documented checklist.

LOCATION

This training is delivered at work sites in each State. (must have minimum numbers)

COST

From \$595.00 – GST free.

HOW TO APPLY

Contact the office at:
studentservices@locatingunlimited.com.au

OUTCOME

On the successful completion a Statement of Attainment for RIICCM303 – Conduct vacuum excavations is issued.

Vacuum excavation is a non-destructive digging technology that improves the safety of workers on site, is more cost effective and importantly, vacuum excavation is significantly more environmentally friendly than conventional digging machinery.

This short course provided by Locating Unlimited ensure adequate and professional training for our learners in the safe and competent operation of Vacuum Excavation equipment within a civil construction environment.

Our Vacuum Excavation course includes the following sections:

- Planning a job
- Safety and risk management
- Operation of the vacuum and water jetting system
- Signage, barricading, and exclusion zones
- Start-up and shut down procedures

Practical activities, including practical assessment, are completed on an actual worksite. The site is determined with management and is designed so that company workflows are not interrupted. The operator travels to the site and sets up as they would normally do.
